What's New

Spray Tanning

DID YOU KNOW?

The British Association of Dermatologists, report that more than 70,000 new cases of skin cancer are diagnosed each year in the UK.

But you don't have to stay pale if you like a tanned look - just opt for a spray tan instead!

FAKE IT don't BAKE IT!!!!

Spray Tanning

You can have a safe beautiful tan achieving the same result as 10 days in the sun, without the ageing effects.

Tan application is easier, less messy (cubicle used) and has better results than ever before!

In a few hours you will have a gorgeous sunless tan which should last between 5-7 days depending on your own skin care regime. If you follow the pre & after care advice, your tan can last even longer.

The main ingredient in the solution is known as Dihydroxyacetone (DHA)

The DHA is not absorbed through the skin into the body and it has no toxicity.

The Amino acids on your skins surface react with the sugar in the DHA and with a little help from the oxygen around us your skin begins to produce a beautiful, streak & orange free, sunless tan.
